

Points of Difference

LocknCharge Carrier 30 Cart™ and Joey 30 Cart™

The Carrier 30 is a heavy-duty fully welded steel cart with limited pry points. The Joey 30 features a lightweight, riveted design. While both feature a top-loading design, the Carrier 30 includes baskets, while they are an optional accessory for the Joey 30 Cart. Inside the cart the Carrier 30 features adjustable shelves that can raise the height of the devices for easier access. The Carrier 30 features a combination padlock, while the Joey 30 has a keyed padlock.

Design

Security

The Carrier 30 has limited pry points and is completely made of heavy-duty steel. The Carrier 30 is the ultimate Cart for security. The Joey 30 features a riveted steel design and includes a keyed padlock which provide good security compared to cabinet style carts, but isn't as secure as the Carrier 30. The Carrier 30 features a lock down kit which can bolt the cart to the ground or wall for additional security. The lock down kit is an optional accessory for Joey 30.

Flexibility

The Carrier 30 Cart can be configured to fit almost any device, even laptops up to 15" using our wire racks. Easily mix and match the configuration in a cart with baskets and wire racks to meet your deployment needs. Half baskets, half a wire rack - or all of one. It's up to you! As your deployment changes over time, the Carrier Cart can flex with you. The Joey 30 features plastic dividers within the cart, and can be upgraded with optional baskets for additional time savings in deployment of devices.

Cable & Power Management

Cable management in the Carrier 30 is easy - simply pull the cords through the side tension channel and plug the power bricks into the bottom of the cart. In the Joey 30, cables are housed in a triangle channel that groups 10 cables together. Simply plug the power bricks into the bottom, pull the cables up through the side channel, and replace the cap on the triangle channel to keep cables in place. Both the Carrier 30 and Joey 30 feature our ECO Safe Power management system to easily control charging. Both feature an external display of charging status.
