

# Points of Difference

## LocknCharge Carrier 30 Cart™ and Luxor 30 Tablet/Chromebook Cart

The Luxor Cart is a typical cabinet on wheels. This design requires the end user to bend down to access the bottom shelf and students to line up for devices. The Carrier 30 is a top loading design with Baskets so no one has to bend down to access devices and they can easily be distributed in a fraction of the time. The Luxor Cart requires frustrating configuration of dividers to accommodate a variety of devices. The Carrier 30 can easily accommodate most devices with no configuration.

### Design

### Security

The Carrier 30 has limited pry points and is completely made of heavy-duty steel. The Luxor Cart has several potential pry points decreasing security. The Carrier 30 has a secondary optional heavy-duty concrete floor lock down kit that improves security.

### Set Up

### Wire Management

When you receive your Carrier 30, it is ready to use - no need to install handles, wheels or other components which can take your valuable time away from deploying devices. With the Luxor Cart, assembly and tools are required before you even get to wire the cart.

The LocknCharge Carrier 30 is a universal cart - it fits almost any device. Charge, store, secure and transport up to 30 iPad, Chromebook, or Tablet devices. Featuring Baskets by LocknCharge, the Cart is the alternative to the traditional cabinet on wheels. Navigate stairs and rough terrain effortlessly. Increase learning time by deploying devices faster. Access from the top means no more bending down to access devices.

Wiring the Luxor Cart is cumbersome due to its cabinet style design - set-up requires moving between a back and front panel and feeding cords through. The Carrier 30 has a side tension cable management channel that insures that cables won't slip while wiring, while being easy to feed cords through. This means the entire cart can be wired in a fraction of the time it takes with a Luxor Cart.

LocknCharge... it just makes life easier.
